

Create the Flask Application

Date	18 November 2022
Team ID	PNT2022TMID42734
Project Name	Smart Fashion Recommender Application

Flask code and running :

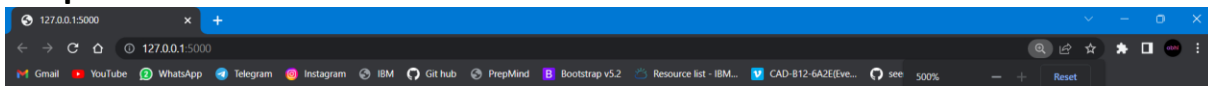

The screenshot shows the Visual Studio Code editor with a file named `app.py` open. The code is as follows:

```
1 from flask import Flask
2 import os
3 app = Flask(__name__)
4
5 @app.route("/")
6 def home():
7     return("works!")
8
9 if __name__ == "__main__":
10     app.run(debug=True)
```

The terminal at the bottom shows the command `python app.py` being executed. The output indicates that the Flask app is running on `http://127.0.0.1:5000` and that the debug mode is on. A warning message is also displayed: "WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead."

Output:

works!
